- PENDANTS: sixteen
- MOUNTING: white powder-coated round canopy 350mm (13.5") diameter
- LAMPING: 1.8w LED (29w total draw)
- DIMMING: dimmable. Use electronic low voltage dimmers only
- MATERIALS: blown glass, electrical components, white powder-coated canopy, bead blasted stainless steel or white powder coated armature components, aircraft cable, white powder coated swag hooks.
- WEIGHT: approximately 49kg (110lb)
- TRANSFORMERS: Remote mounted

DESCRIPTION

The 28.16a is a 28 installation using 16 pendants and a modular stainless steel armature system mounted to a canopy. These fixtures are designed to be grouped into sprawling assemblies of a variety of different sizes and types, but are strong compositional elements on their own. **Installation of these creeping fixtures requires swag hooks every 1m (3')** from the canopy or in groupings of more than 3 pendants to support long spans. Given the improvisational aspect of this fixture, appropriate structural support is required to hold 9kg (20lbs) for each swag hook throughout the entire area in which the fixture will be hung.

28 is an exploration of specificity in manufacturing. Instead of designing form, the intent was to design a system of making that yields form. Individual 28 pendants result from a complex glass blowing technique whereby air pressure is intermittently introduced into and then removed from a glass matrix which is intermittently heated and then rapidly cooled. The result is a distorted spherical shape with a composed collection of imploded inner shapes, one of which acts as a shade for a low voltage (12V, 1.8W) LED light source.

A modular armature system connects the glass pieces to a series of branches and stems. Each armature segment carries low-voltage electricity and diverges into 2-4 separate branches, allowing both vertical and horizontal deployment with an infinite variety of possible forms. The branches simply click together during installation for custom, on-site arrangements.

NOTES

- + Purchase replacement lamps online at www.bocci.ca/lamps
- + Unless otherwise specified, a single class 2 LED driver will be sent with every 13 pendants.
- + Note: This fixture requires the drivers to be mounted remotely in an easily accessible and hidden location for ease of long-term maintenance.

28.16a

PRODUCT SPECIFICATION

1

Insert the starter piece of the armature into the canopy. Secure it with the lock washer and nut.

2

Measure and mark the light fixture canopy position on the ceiling.

Note: the client is responsible for providing a robust 3/4" (19mm) plywood backing or MDF blocking to securely anchor to the structural substrate.

Connections from the plywood to the structural substrate are the client's responsibility. Measure the plywood so that it fits within the canopy side walls (refer to detail above).

Anchor the plywood backing to the structural substrate.

3

Connect the cables to the open slots in the terminal block on the 12V side of the transformers. Ensure that the braided outer wires are all connected to one 12V output wire and all inner insulated wires are connected to the other or a short will occur.

Once all the coaxial connections are made, lift the fixture into position and connect the line voltage to the open slot in the appropriate terminal block.

4

Anchor canopy into the plywood backing using the fasteners provided.

5

Take inventory of all the parts in the kit as you will use these to compose your fixture.

There may be ten types of components and up to three sizes of each piece (Ø17mm, Ø20mm, Ø25mm) depending on the fixture ordered.

You may use all the components, or any combination of them in your composition.

Note the connectors on each end are either male (m) or female (f). A male part can only be joined with a female part.

6

All exposed male connecting pieces will terminate with pendants, keep this in mind as you compose your light fixture. Installation strategy involves connecting a combination of straight female connector pieces and bent or branch male components.

Take your time to compose and recompose your light installation to achieve your chosen aesthetic (see bocci.ca for examples).

Note:
It is easier to assemble branches in smaller sections before attaching to the canopy.

7

Each armature component can be rotated 45 degrees. Once the orientation is chosen, set in place using the set screws provided with a slotted screw driver. Each piece of tubing has 2 - 3 set screws around its circumference. These should be tightened evenly so that all set screws are engaged the same amount, centering the male end within the female connection.

Note:
The size of the armature tubing corresponds to specific set screw sizes:
small Ø17mm - M4
medium Ø 20mm - M5
large Ø 25mm - M6

8

Insert LED into lampholder, and then plug each lampholder into all exposed male connections.

Slide the pendant onto the male connector, orient as desired, and secure using an M3 set screw (provided).

Note:
If the fixture sags or seems unbalanced use swag hooks to add additional support.

9

As you are assembling the fixture, add a swag hook for each point 1m (3') from the canopy or any clusters of 3 or more pendants.

Part 1:
Locate the M5 set screws with the hole in the middle on either medium or large armature components. Thread the end without the ball from the concave side (opposite slotted side) through the set screw until the ball sets. Insert the set screw into the hole with the slotted side out. To tighten, bend the aircraft cable into the slot and use a screw driver.

Part 2:
Locate a swag hook directly above the set screw and using the screws provided, fasten it into the ceiling. Pass the aircraft cable through the small hole on the bottom of the swag hook and thread it through until it emerges from the top parallel to the ceiling. Pull until tight, and tighten set screw on side.

Note:
Do not trim excess aircraft cable until entire fixture is complete. It may shift as pendants are added and the cable lengths may need to be adjusted.

10

Repeat steps 7 - 9 until entire fixture is complete. The center of mass will shift as the fixture is assembled and you may have to adjust the swag hook lengths and locations throughout the install so leave excess aircraft cable emerging from the swag hooks until all pendants are added.

Tighten all set screws, trim excess aircraft cable and clean fingerprints from pendants.

Turn light fixture on.
