The 24.2 LED lampping option offers a longer-life, energy efficient alternative to typical halogen or xenon lamps. This proprietary and worldwide patent pending design utilizes Bocci's standard G4 lamp holder (12mm/0.47" in diameter) which is designed to accept either the bocci 24.1 long life xenon lamp or the bocci 24.2 LED. The possibility of dual usage allows the opportunity for existing chandeliers with xenon lampping to be retrofitted on site by simply switching out the lamp head and transformers.

This unique replacement design is unlike typical embedded LED fixtures as it eliminates the waste associated with catastrophic failures that leave no choice but to replace the entire fixture. When it comes time to relamp with the 24.2, the LED heads may simply be replaced, as with conventional lamps. The 24.2 keeps the fixture out of landfills in the future, protects your investment and introduces a significant saving of energy.

The 24.2 has a colour temperature of approximately 2900°K casting a soft, warm light with the output akin to a 5watt xenon lamp. For comparative purposes, the consumption rate of the 24.2 is roughly 0.3 Watt per pendant. The lamp life is 50,000 hours minimum, dependant on ambient conditions. The 24.2's comes with a 2 year warranty replacement. 24.2's are readily available for re-order with Bocci's quick ship program.

Materials:

Warm white light emitting diodes, frosted borosilicate cover, stainless steel base and electrical components.

Worldwide patents issued and pending. World Wide Patents Pending  
Made in Vancouver, Canada.

 Approved to UL standards by CSA
